

INDUSTRY NINE

LACING PATTERN

CORRECT LACING ORIENTATION FOR HYDRA2 CLASSIC FLANGED HUBS

28h - 32h Hubs are intended for a 2x or 3x pattern.

Radial lacing prohibited.

Pro Tip: When laced the circular Industry Nine logo should be visible from the rim's valve drilling.

○ Ridge

○ Valley

Follow spoke placement in the hub flange orientation as pictured. Note the “ridge” and the “valley” of the scalloped flange shaping.

The first crossing for any spoke will occur in the “valley” of the flange when laced properly. Re-lace if the first spoke crossing is occurring across a “ridge”
